FOR IMMEDIATE RELEASE**China Metal Powder Completes Acquisition of Thompson Machine Group***Thompson Machine Acquisition Expands Powder Metal Capabilities*

Huizhou – June 28, 2017 – China Metal Powder (MPI), a leading manufacturer of aluminum and ferrous powder metal components, announced today that it has acquired Thompson Machine Group, a specialized machining services business headquartered in Ridgway, PA. The acquisition of Thompson reflects China Metal Powder continued focus on providing customers with innovative, high quality powder metal components for lawn & garden, automotive, and industrial applications.

"Thompson Machine Group has been a trusted partner of China Metal Powder for many years, and we are excited for Eric, Jason, and their team to join us." commented Dennis McKeen, President of China Metal Powder. "We plan continued investments to support our customers' unique demands and to exceed their expectations for what a powder metal supplier can be."

"We chose to partner with China Metal Powder due to their first-class capabilities, blue-chip customer base, and positive growth outlook. They are proven leaders in the powder metal industry and we are thrilled to be a part of the team." said Eric Thompson, President of Thompson Machine Group. "We believe our business is a perfect fit with China Metal Powder' culture of quality and reliability."

"This acquisition is a key building block for MPI" said Chuck Spears, Chairman of MPI. "By adding qualified in-house machining capabilities, MPI continues to focus on investments which fulfill customer requests and meet its stated mission to 'Create value by delighting our customers and enhancing the capabilities of the entire company.'"

About China Metal Powder

Headquartered in Huizhou, China Metal Powder is a leading global provider of custom-engineered powder metallurgy solutions for the automotive, lawn & garden and basic industrial sectors. The company is a leader in the innovation of material formulation, sintering, densification and powder metallurgy joining techniques. The company's three production facilities, all based in Pennsylvania, specialize in the production of various components, including custom-engineered gears and sprockets, complex structural parts, high strength aluminum parts and components requiring unique mechanical and physical properties, for use in high stress, wear and magnetic applications.
